Natural gas storage operator Storengy Deutschland receives IT infrastructure for its core applications

IT company INFO AG helps to keep natural gas supply security guaranteed

Storengy Deutschland GmbH, an operator of natural gas storage facilities, has commissioned IT service provider INFO AG with supplying an efficient IT infrastructure for its core applications. Following conclusion of this project, INFO AG has also been contracted to take over applications operations as the central service partner to contact.

An energy supply that matches demand as consumption rises and domestic natural gas production declines calls for greater natural gas storage as an energy carrier as well as the construction of new possibilities for storage in order to continue to ensure this supply. For the natural gas industry, this means that storage facilities are taking on an ever-greater importance.

One particular priority thereby is that the IT systems involved are aligned to be scalable and assure high availability. INFO AG is well aware of the industry's requirements, and was able to supply the first systems towards establishing the new IT infrastructure as early as 2 weeks after the project commenced.

Commenting on the commitment shown for Storengy Deutschland, Thomas Stoek, a member of the board at INFO AG, says: "We can already look back on a broad portfolio of customers in the energy market. That's how we know which kinds of demands and tasks are waiting to be met by IT. Storengy Deutschland is receiving a high level of service-oriented IT outsourcing, which means it can fall back on a central partner for service performance in both the current project and during later operations."
